CrazybeeX FR V2.2

CrazybeeX FS V2.2

CrazybeeX PNP V2.2

4.Receiver bind procedure

URUAV UZ85 CrazybeeX FR V2.2 Bind procedure:

Make the on board receiver get into bind mode: For 3.5.7 version firmware Plug USB and then press the bind button for 1 second , the Red LED on the top of the flight controller will getting to be solid , this indicate the receiver is in bind mode; For 4.0.x version firmware Plug USB and then connect betafight configurator and then move to CLI tab , type "bind_rx_spi" ,the Red LED on the top of the flight controller will getting to be solid , the onboard receiver is in bind mode; For 4.1.x or 4.2.x the bind code is "bind_rx"Make your Frsky transmitter get into bind mode . If bind is successful the red LED will starting to blink. The red LED wouldn't blinking when binding with some new ACCESS firmware frsky radio , but the bind is actual successful , need to go to CLI command and type "save" to finish the binding .

URUAV UZ85 CrazybeeX FS V2.2 Bind procedure:

Make the on board receiver get into bind mode: For 3.5.7 version firmware Press and hold the bind button for 1 second ,then plug USB, the Red LED at the bottom of the flight controller will blinking fast , this indicate the receiver is in bind mode; For 4.0.x version firmware Plug USB and then connect betafight configurator and then move to CLI tab , type "bind_rx_spi" ,the Red LED at the bottom of the flight controller will blinking fast , the onboard receiver is in bind mode; For 4.1.x or 4.2.x the bind code is "bind_rx"Make your Flysky transmitter get into bind mode . If bind is successful the red led will getting to be solid.

URUAV UZ85 CrazybeeX PNP version bind procedure based on different external receiver .

We already pre-solder the receiver wire for SBUS receiver .

IR1 pad is inverted serial signal used for SBUS receiver

RX1 pad is Non-inverted serial signal for ibus/dsm2/dsmx receiver
