Mount the main wings with the provided thumbscrews.  
Don't forget to place the main spar first.

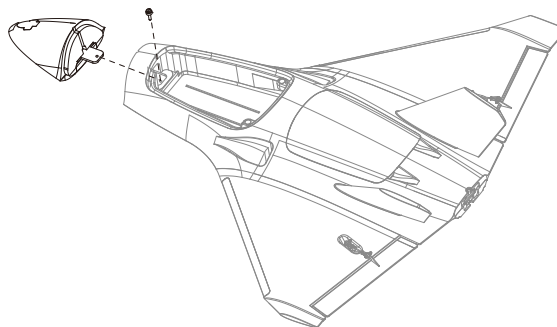

You will fix the motor seat with the 2 provided screws.  
Be sure it is aligned and firmly tightened.

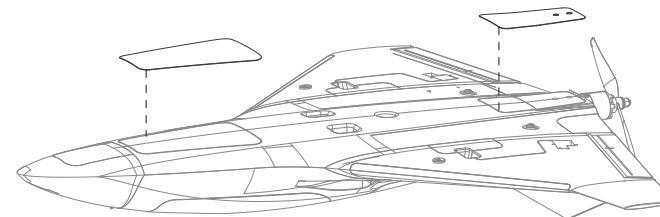

The vertical fins are removable and can be fixed by the  
2 provided thumbscrews.

Once you placed all your FPV gear, be sure both hatches  
fit flush against the fuselage.

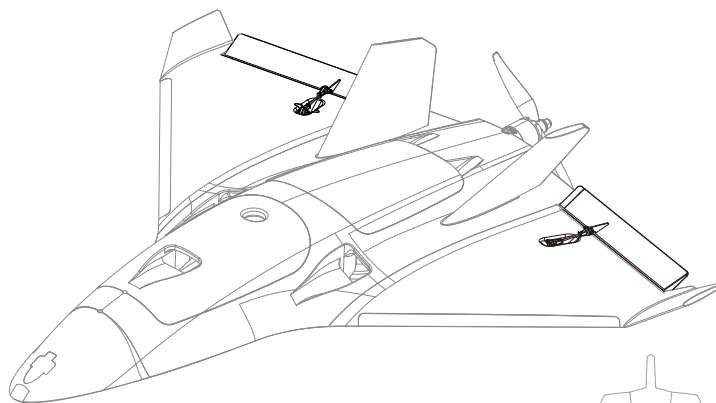

You can add the nose of your choice using the provided screw.

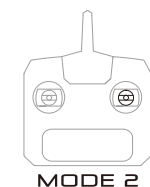

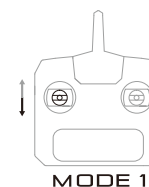

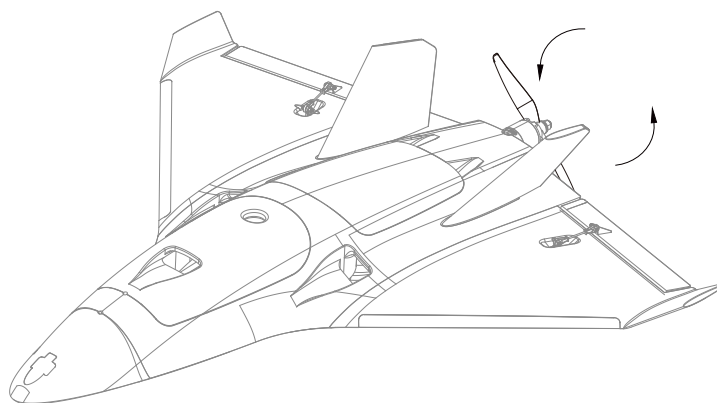

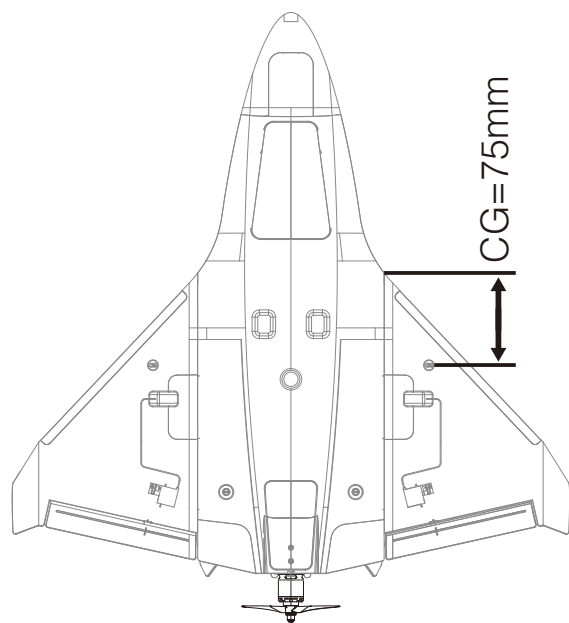

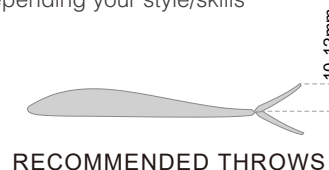

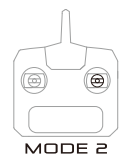

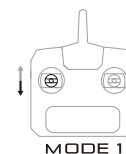

Attach the Teflon skin protection for landings according to the figure.

**ZOHD**  
Inspiring The Future

 Reflex on elevons: 3mm at level  
 Recommended max. Throws:  
 10-12mm depending on your style  
 Recommended expo for manual:  
 55-75 depending your style/skills

This model requires experience to setup and fly. It's by no means designed for beginners. If you're starting in the hobby, please check some of our other products that will be more suitable for beginners. This is a powerful unit considering the size and weight and will require you to have strong orientation abilities, specially flying line of sight. We also recommend you to fly this unit with stabilization (flight controller) unless you're extremely skilled with the sticks. Finally consider adding lead weights to achieve a perfect CG balance. Enjoy!
