Product parameters

Parameters / Protection mechanisms

Product name	CNC DC voltage buck-boost power supply	Product model	ZK-SK40
Input voltage	6-36.00V	Output voltage	0.5-36.00V
Output current	0-4.5A	Voltage accuracy	±0.3%+3 words (Calibratable)
Output power	40W	Output current accuracy	±0.5%+3 words (Calibratable)
Voltage resolution	0.01V	Current resolution	0.001A
Data group storage	11 groups	Silicon rubber keypads	5
Screen size	Upgraded 1.8-inch large screen, 36 * 29mm visible range	Buzzer	Yes
Conversion efficiency	About 88%	Soft	Yes
Product size	83x48x29.4mm (Height does not include rotary encoder)	Product weight	Net weight of product: 103g Weight with packaging: 123g

Protection mechanism			
Input anti reverse connection	Yes	Output anti backflow	Yes
Under voltage protect (LUP)	5.5-35V adjustable, factory default value of 5.5V		
Output overvoltage protection (OUP)	0.5-37V adjustable, factory default value 37V		
Output overcurrent protection (OCP)	0.001-4.6A adjustable, factory default value 4.6A		
Output overpower protection (OPP)	0.01-41W adjustable, factory default value 41W		
Over temperature protection (OTP)	30-99 °C adjustable, factory default value of 90 °C		
Timeout protection (OHP)	1-99 hours and 59 minutes, factory default off		
Overcapacity protection (OAH)	0.001-9999Ah, Factory default off		
Superenergy protection (OPH)	0.001-4000KWh, Factory default off

Multiple protection

- ✓ Anti reverse connection
- ✓ Anti-backflow
- ✓ Under voltage protection
- ✓ Overvoltage protection
- ✓ Overcurrent protection
- ✓ Over temperature protection
- ✓ Over power protection

[Independent silicone button to set voltage or current]

One click entry, one click exit, fast and concise, rejecting complexity.

[Gold sinking process for LCD display boards]

Eliminate poor contact caused by oxidation, resulting in incomplete display after prolonged use.

[Double snap shell]

The connection between the upper and lower boards is more reliable and stable.

[Further improvement in performance]

Power upgrade, including an external fan port for expandable fans.

[Independent architecture for upper and lower boards, independent MCU]

Replace the LCD or color display board at will, and the power board can also be used independently.

Key functions

Switch / Set / Turn Off

Short press: Switching input voltage/
output voltage display

Long press: Enter or exit the
settings menu

Long press: Open/Unlock function

Short press: Selection bit (setting
menu interface)

Left rotation: Number reduction

Right rotation: Number increase

**Voltage
setting**

**Current
setting**

Short press: Switching Output power W/
Capacity Ah/Energy Wh/Time h/
Temperature °C/Rotating display

Short press: Turn off/on
output

Long press: Sleep shutdown

Upgrade silicone buttons

Effortless / Soft / Silent / Durable

Effortless
Silent

Soft
Durable

Damping
perception

Waterproof
Dustproof

The silicone button material is soft, comfortable to touch, and
☆ has an excellent hand feel.

Compared to mechanical buttons, they can withstand long-term
use and frequent pressing without wear or failure, making them
☆ more durable and have a longer service life.

Instructions for use

Switch display / Set parameters

Set voltage and current/call data group

Press **V-SET** to enter the voltage setting interface, adjust the flashing position, press the encoder to select the position, and rotate to adjust the size. After setting up, press **V-SET** again to exit the setup. Press **OK/I** to switch data groups Cd00-Cd10.

Press **I-SET** to enter the current setting interface, adjust the flashing position, press the encoder to select the position, and rotate to adjust the size. After setting up, press **I-SET** again to exit the setup. Press **OK/I** to switch data groups Cd00-Cd10.

Switching output/input voltage display

Press **M/I** to switch between output voltage and input voltage display

Switching output power/capacity and other displays

Press **OK/I** to switch output power W/capacity Ah/energy Wh/time h/temperature / rotating display

ON 026.6 W	Power W
ON 0.026 Ah	Capacity Ah
ON 0.522 Wh	Energy Wh
ON 00:03 h	Time h
ON 31.9°C	Temperature°C

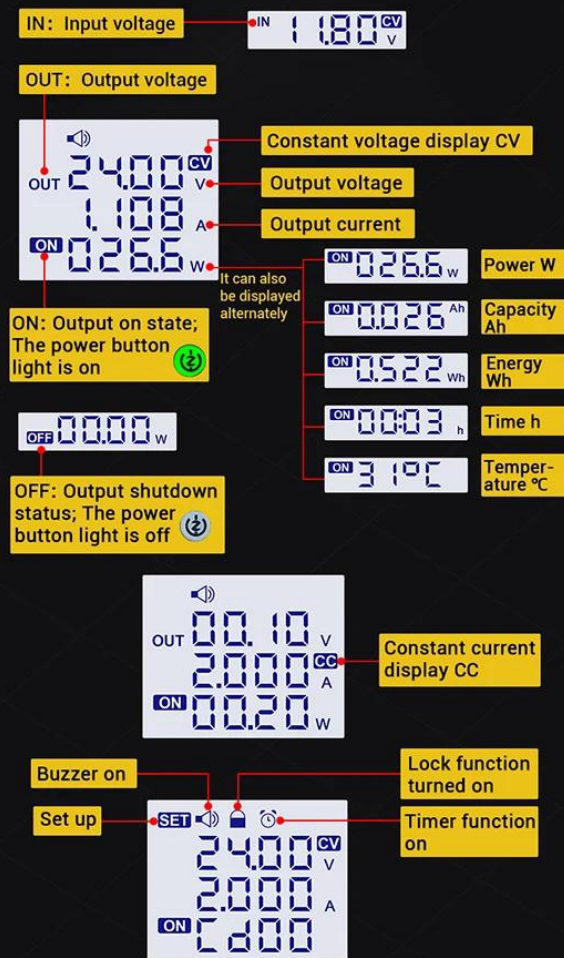

Locking function

Show lock symbols

On the normal display interface, long press and hold the rotary encoder for 2 seconds to lock the set voltage and current to prevent accidental operation; After locking, press and hold the encoder for 2 seconds to unlock. After locking, the power button can still operate normally, ensuring that the power can be disconnected at any time.

Display interface

Input / Output / Settings

Settings interface

Data group parameters / system parameters

Press and hold the **M/t** for two seconds to enter or exit the settings interface

Parameter settings within the data group

In this set of parameter settings, Cd00 represents the data group 0; Press the V-SET button to select the data group Cd00-Cd10

SET
Cd00
OVP
OFF 37.00

Set output overvoltage protection value (OVP), default 37V

SET
Cd00
OCP
OFF 4.600

Detail display

Buzzer / Fan interface / Plug-in terminal

Built in buzzer

Key prompt, alarm prompt, and echo for everything

Reserve 5V fan interface

It can be cooled by adding a fan on its own, supporting fans up to 5V150mA, and can use a 30mm size fan fixed with M3.2*19 screws.

Upgrade plug-in terminals

Easy to disassemble and replace.

Parameter settings

Press and hold **M/I** for 2 seconds to enter the settings menu. The first interface is the OUT settings interface,

Press **V-SET** to switch data group names, press **I-SET** to select the previous parameter,

Press **OK/I** to select the next parameter.

Parameter settings within the data group

OUP setting (Overvoltage protection)

Short press the encoder to select a bit and adjust the value size by rotating it.

For example, if OUP is set to 24.00, when the output voltage is greater than 24.00V, the output will turn off the protection, thereby protecting the load from being burnt out due to overvoltage power supply. After protection, the bottom row will display OUP. Press the power button to cancel the protection.

OCP setting (Overcurrent protection)

Short press the encoder to select a bit and adjust the value size by rotating it.

For example, if OCP is set to 2.000, when the output current is greater than 2.000A, the output will turn off the protection, thereby protecting the load from being burnt out due to overcurrent. After protection, the bottom row will display OCP. Press the power button to cancel the protection.
